

IRIS Release Notes

6.0.0.2 – Released 8/12/2020

Pre-Arrival		
Description	Type	Ticket
START Integration Modified IRIS to accommodate biodata changes as a result of RPC's transition from their old WRAPS application to their new START application. For example: The number portion of Case Number will now be 8 digits instead of 6.	Enhancement	243677
AORs Sent by Affiliate Notification Corrected an issue with the "AORs Sent by Affiliate" RA notification that was sometimes marking a case with a Type of "Corrected" when it should have been marked as "New."	Bug	247800

Quarterly Consultation		
Description	Type	Ticket
Quarterly Consultation Console Due to COVID-19, PRM has changed the rules on how RAs report compliance for Q3 and Q4 2020. Therefore, IRIS needed to be changed to mark an affiliate as compliant if they have at least one yes per group in either the Participated column or the Meet/Follow Up column. A switch was added to allow determining compliance by the old or new rule in case PRM changes back to requiring participation in a simultaneous QC.	Enhancement	247569

Matching Grant		
Description	Type	Ticket
MG Report Bulk Unlock Added a description of this feature on the page to help understand how the bulk unlock works.	Enhancement	246499

Reports		
Description	Type	Ticket
WRAPS/START Version Number Added RPC's Record Version # to Custom Reports (001 = imported from WRAPS application; 002 = imported from START application) to aid in troubleshooting once data is being received from both of RPC's systems.	Enhancement	248389

Administration		
Description	Type	Ticket
IRIS APIs In IRIS v.5.7.7, a daily job was created to deactivate user accounts that have not been used in over 90 days. This had an undesirable effect on the IRC and Loan Web Service APIs since those jobs use generic IRIS user accounts for authentication. The solution was to have the APIs update Last Login Date each time they run to keep the generic user accounts active.	Bug	246789
